

Seeking patients with **bunions** for a research study called “Dystance”

The Dystance study will look at the safety and effectiveness of a study medication compared with placebo (no active ingredients), given by injection, in adults ages 18 years or older with hallux abducto valgus (HAV), more commonly known as a bunion.

Eligible participants will receive:

- Potential access to a study medication at no charge
- Opportunity to participate in the Open-Label Period where all participants will receive the study drug
- Study-related care and monitoring by a healthcare team
- Education about bunion condition

What is learned from this study may help those with bunions in the future. To see if you are eligible to participate in the Dystance study, contact:

Joseph Coles at 210-480-6501

 **Dystance**
